Sandra Heinemann Kunkel

The purpose of this guide is to provide an overview of the basic structural components of living cells. In reviewing these structures, we will also discuss their functions. All living organisms are composed of cells. A cell is a small, membrane-bound compartment that contains all the chemicals and molecules that help support an organism's life. An understanding of the structure of cells is one of the first steps in comprehending the complex cellular interactions that direct and produce life. Cells can be thought of as building blocks of organisms. Some organisms are composed of a single cell. Others, like ourselves, are composed of millions of cells that work together to perform the more complex functions that make us different from bacteria.

What Do I Do When...[®] The Answer Book on Assessing, Testing and Graduating Students with Disabilities -- Second Edition

By John W. Norlin, Esq.

NCLB and the reauthorized IDEA brought new rules governing alternate and modified assessments. *The Answer Book* brings you solutions. Through easy-to-follow questions and answers, the brand new Second Edition spells out these first-time requirements and how to meet them -- so you can educate students with disabilities in the general education curriculum while preserving districtwide standards for all students.

From assigning grades and measuring progress, to taking part in statewide assessments, you get answers to your everyday concerns -- plus up-to-date guidance on:

- Revisions to state and districtwide testing requirements for students with disabilities as part of NCLB's mandate for adequate yearly progress
- Current standards for alternate assessments
- New rules for evaluating students for specific learning disabilities
- Changes in states' high school exit examination requirements
- OCR letters on transcripts and report cards for students with disabilities
- And much more
